Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 11-15 and 30 are rejected under 35 U.S.C. 102(e) as being anticipated by Au et al (6,681,359).

As per claim 11, Au et al disclose an apparatus for testing an integrated circuit using a self-test device that is located in the integrated circuit, which comprises:

a self-test control device (MBIST controller) for causing testing of the integrated circuit by the self-test device before the integrated circuit is connected to an external testing device that performs a function selected from the group

Art Unit: 2117

consisting of reading out results of the test and evaluating the results of the test;

a test result memory (boundary scan register) located on the integrated circuit for storing the results of the test;

an output circuit for forwarding the results stored in said test result memory to the external test device. (See col. 10, lines 1-51, col. 8, lines 40-43 and col. 11, claim 1).

As per claim 12, Au et al further disclose wherein said self-test control device is configured to complete the testing of the integrated circuit before the integrated circuit is connected to the external testing device. (See col. 10, lines 1-51, col. 8, lines 40-43 and col. 11, claim 1).

As per claims 13-15 and 30, Au et al further disclose wherein said self-test control device is configured to test the integrated circuit while allowing a function, selected from the group consisting of temporarily storing the integrated circuit and transporting the integrated circuit to the external testing device (ATE), to be performed. (See col. 10, lines 1-51, col. 8, lines 40-43 and col. 11, claim 1).

3. Claims 1-4, 6-10, 16-17, 19-23 and 29 are allowable.
